THE WORLD'S LARGEST PRODUCER OF SHIP MACHINERIES

Since Oriental Precision & Engineering Co., Ltd. was established back in 1980, it has always believed that creating trust with the clients should have been the priority; so to serve its clients and bring them the best quality products, the company has relentlessly endeavored to become the industry's best master.

The company designs and constructs the cranes and the davits in its 6-acre manufacturing facility in Busan. Today Oriental Precision & Engineering is the world's largest producer of ship machineries, pumping out some 1,100 cranes, 50 deck machineries, and 400 boat davits every year. Oriental Precision & Engineering will not idle in content just yet. It is researching actively and investing resolutely to enter the offshore structure machinery market.

For the last forty years, Oriental Precision & Engineering has overcome many challenges and obstacles, and in the process, the company has become Korea's number one producer of ship and marine components and machineries. That is a significant statement, considering Korea's status as the world leader in shipbuilding business. As Oriental Precision & Engineering has demonstrated in the past, its pursuit of perfection will continue, and men and women at Oriental will continue to work diligently to show the world their potential, and to introduce to the world the better, innovative shipbuilding solutions.
